Ingenuity for life

Siveillance Access Mobile

Travelling a road to digital simplicity.

At a glance

Technology travels down the road of constant change and the path today is through a digital transformation where "Software as a Service" (SaaS) is one of the top trends in the software business.

The idea behind SaaS is to provide software on subscription basis instead of selling it. Maximize efficiency through scalability and flexibility with the right cost plan for your corporate landscape.

The challenge

Siemens took on a challenge to support access control needs with a new twist. Siveillance Access Mobile is Siemens answer to mobile access control in the cloud. In the future we see the use of keys to operate locks a thing of the past.

Our solution

Knowing who has entered what building at what time can be a major issue for security but with our cloud based solution our customer can schedule everyone from employee, cleaning personnel to visitors only allowing access to what they need to do their job.

Our innovative solution brings together a secure and user friendly cloud application to manage permanent or time-controlled access authorizations for

doors and a smartphone app that makes it easy to use digital keys to open doors. The digital keys will be automatically distributed to the smartphone app of the entitled users.

Security starts at the front door so there is a clear need to provide mobility for employees moving through one building, a campus, branch offices or stores. Our digital key solution allows employees to move freely, gaining access to only those places they need to go, when they need to be there. Revoking privileges are as simple as adding one, click and done.

This unique method to opening doors avoids capital costs from lost or stolen keys. The user simply needs to hold the app up to the door's electronic locking cylinder to gain access. This development means that the administration of physical keys and the annoyance caused by lost keys will soon be a thought of the past.

Siveillance Access Mobile is an enabler for our customers to achieve a secure landscape they need in a simple low-cost solution. Reducing the financial burden for our customers is important.

Through a small change to their door locks they gain a whole new means of secure access control without the burden of controller, readers and no cable infrastructure necessary. Siveillance Access Mobile removes upfront Capital expenditure, or CapEx to OPEX eliminating budget discussion at the C-Suite level. Subscription based licensing allows for the flexibility to select a package that fits your business type best. Technology will always evolve therefore digitalization is on the right evolution path to the future.

Smart Infrastructure intelligently connects energy systems, buildings and industries to adapt and evolve the way we live and work.

We work together with customers and partners to create an ecosystem that intuitively responds to the needs of people and helps customers to better use resources.

It helps our customers to thrive, communities to progress and supports sustainable development.

Creating environments that care.
